America's War on Medicine** By Barefoot James Democrats want health care for everyone and want the government to run the program and paid for buy the rich, tax payer dollars and big business. This would double the deficit over night because there is not enough money to pay for this plan. Republicans want health care to stay as is, run by private companies and paid for the way it is now - with tax breaks to business so they can hire more employees. This would stimulate the economy - but this has nothing to do with health care, because having a job does not mean having health care. Neither party addresses the fact - that health care can't be paid for because it is bankrupting America - the government does not have the tax revenues it needs to pay for it, nor do businesses have enough profits to pay for it. Both parties need to work together and look at the **CAUSE OF WHY IT COSTS SO MUCH AND READ THIS BOOK TO SEE "HOW TO FIX THAT FIRST"**. THEN incorporate a plan that has the government making sure private business and the doctors themselves follow the plan. Government has proven that they cannot successfully run health care. Example Medicare and Medicaid - both disasters. Doctors have proven they can run health care, if they had better support from the government to **REGULATE** the insurance companies and lawyers who want a **BIG CHUNK** of the money we pay to have health care. Right now there are - too many hands in the cookie jar. **Anathema! War on Medicine**, addresses the history of what has happened, and what will happen. The value of this book is it also offers - **A SOLUTION TO THE HEALTH CARE PROBLEM**. Didn't President Obama say he would look at ANY solution to this Health Care problem? Then I ask you President Obama - Why have you not read this book and invited Dr. Pryce to DC to discuss a real solution? Real health care cost's about \$15,000 a year for a family - if a family makes \$20,000 a year how are they going to pay for those plans? Obama Care wants to give them a \$2500 or even \$5000 tax break - big whoop. Try to feed, house, cloth and transport a couple kids on \$20,000 to even \$35,000 a year - there is no room for nothing else - they are already eating way too many meals of beans rice. What if health care cost \$1200 to \$2000 a year that covered **EVERYTHING** (just as good and your politicians health care) for your family? This book addresses what has to happen to make this a reality! `Let's start a Gideon Movement' ask doctors to help you help them - ask them to buy some books and pass them out to your political leaders, teachers, churches and other doctors. Ask people to buy this book (like I'm doing with you) buy some for your family and friends and ask them to do the same. Get **PEOPLE** to read this book and let's take back our Health Care - let's start a Health Care Revolution. But first you have to understand the problem and the solution, and we all need to be on the same page. Buy this book and read it. Then get active.

The fact that we do not have universal health care digital imaging of medical reports, that doctors have been 'forced' into replicating tests so they can avoid our litigious tendency, that there is no cap on what a 'victim' or family can recover are the things that need to be fixed. If we and our representatives could all get on the same page and read this book and then pass it on to someone else, the sooner we would get to the solution to reform. This is the kind of book that should be placed in every Congress person's in-basket and it is the **ONE** book (after the Bible) every American ought to read.

Why do we allow politicians to make medical decisions when they have **NEVER** practiced medicine a day in their lives?

There has been a War on America's Medical Care System for the past 4 decades. Forces in the private sector and the public sector which are well funded and organized have systematically destroyed the American Health Care System. In 1971, health care in America cost \$356 per person per year and was ranked Number 1 in the world. Nearly 4 decades later, the cost has skyrocketed to nearly 20 times the cost at \$6,675 per person and is ranked last when compared to other industrialized nations. In addition, Americans have the most expensive care in the world in return for the fewest services. Low reimbursements and a burdensome liability system with huge malpractice insurance costs are driving American doctors out of business in record numbers. This book introduces a radical new plan in 3 steps to bring America into line with the rest of the industrialized world with regard to cost, availability and quality of service. It introduces a new liability system that does not forfeit protection for injured patients. It eliminates the Medicare system and puts all 300 million Americans on one affordable system at about 1/5th the present cost with complete health care.
