**Martin Adelman, Randall R. Rader, John R. Thomas, Harold C. Wegner : Cases and Materials on Patent Law (American Casebook Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Cases and Materials on Patent Law (American Casebook Series):

0 of 0 people found the following review helpful. but was otherwise in good condition and at a very low price By T. McCarthy Helpful book for patent prosecution. This copy has lots of highlighting added, but was otherwise in good condition and at a very low price. 0 of 0 people found the following review helpful. Five Stars By Paul B. Good book,...just what I was looking for. 2 of 3 people found the following review helpful. Fine for Survey Course By Charles Stein The previous review suggests that the casebook is not a good choice for someone wanting to focus in greater detail on patent prosecution or litigation. I imagine this is intended for use in a survey course, and think it's

fine. It certainly does not teach the MPEP or prepare someone to take the patent bar, but that is not its purpose; I used the PatBar course for that. As far as patent litigation, I won't a course in that until next semester, but I believe this casebook did a nice job in surveying the important principles in litigation.

The authors feel that students considering patent law for the first time should look forward to learning legal tenets as venerable as the Constitution itself yet as current as the latest development from the laboratory bench. This casebook is comparative and constantly refers to aspects of foreign patent systems. This is with the understanding that patent practitioners without an understanding of the international patent system place their clients at a significant disadvantage.
